

- 1) Write a program to sort a list of Employee objects (name, age, salary) using lambda expressions in java

**Code:**

```
import java.util.*;
```

```
class Employee {
```

```
    String name;
```

```
    int age;
```

```
    double salary;
```

```
    // Constructor
```

```
    public Employee(String name, int age, double salary) {
```

```
        this.name = name;
```

```
        this.age = age;
```

```
        this.salary = salary;
```

```
    }
```

```
    // toString method for printing
```

```
    @Override
```

```
    public String toString() {
```

```
        return "Employee{name='" + name + "', age=" + age + ", salary=" + salary + "'}";
```

```
    }
```

```
}
```

```
public class Main {
```

```
    public static void main(String[] args) {
```

```
        List<Employee> employees = new ArrayList<>(Arrays.asList(
```

```
            new Employee("Alice", 30, 50000),
```

```
            new Employee("Bob", 25, 60000),
```

```
            new Employee("Charlie", 35, 40000),
```

```
            new Employee("David", 30, 55000)
```

```

));

// Sort by name
employees.sort(Comparator.comparing(e -> e.name));
System.out.println("Sorted by name: " + employees);

// Sort by age
employees.sort(Comparator.comparing(e -> e.age));
System.out.println("Sorted by age: " + employees);

// Sort by salary
employees.sort(Comparator.comparing(e -> e.salary));
System.out.println("Sorted by salary: " + employees);

// Sort by multiple fields: age, then salary
employees.sort(Comparator.comparing(Employee::getAge)
                .thenComparing(Employee::getSalary));
System.out.println("Sorted by age, then salary: " + employees);
}

// Getters for method references
private static int getAge(Employee e) {
    return e.age;
}

private static double getSalary(Employee e) {
    return e.salary;
}
}

```

## OUTPUT:

```
Sorted by name: [Employee{name='Alice', age=30, salary=50000.0}, Employee{name='Bob', age=25, salary=60000.0}, Employee{name='Charlie', age=35, salary=40000.0}, Employee{name='David', age=30, salary=55000.0}]

Sorted by age: [Employee{name='Bob', age=25, salary=60000.0}, Employee{name='Alice', age=30, salary=50000.0}, Employee{name='David', age=30, salary=55000.0}, Employee{name='Charlie', age=35, salary=40000.0}]

Sorted by salary: [Employee{name='Charlie', age=35, salary=40000.0}, Employee{name='Alice', age=30, salary=50000.0}, Employee{name='David', age=30, salary=55000.0}, Employee{name='Bob', age=25, salary=60000.0}]

Sorted by age, then salary: [Employee{name='Bob', age=25, salary=60000.0}, Employee{name='Alice', age=30, salary=50000.0}, Employee{name='David', age=30, salary=55000.0}, Employee{name='Charlie', age=35, salary=40000.0}]
```

- 2) Create a program to use lambda expressions and stream operations to filter students scoring above 75%, sort them by marks, and display their names.  
in java

### Code:

```
import java.util.*;
import java.util.stream.*;

class Student {
    String name;
    double marks;

    // Constructor
    public Student(String name, double marks) {
        this.name = name;
        this.marks = marks;
    }
}
```

```

// Getter for marks
public double getMarks() {
    return marks;
}

// Getter for name
public String getName() {
    return name;
}
}

public class Main {
    public static void main(String[] args) {
        List<Student> students = Arrays.asList(
            new Student("Alice", 82.5),
            new Student("Bob", 67.0),
            new Student("Charlie", 91.2),
            new Student("David", 74.9),
            new Student("Eve", 88.6)
        );

        // Filter students scoring above 75%, sort by marks, and display names
        List<String> topStudents = students.stream()
            .filter(s -> s.getMarks() > 75)

            .sorted(Comparator.comparingDouble(Student::getMarks).reversed())
            .map(Student::getName)
            .collect(Collectors.toList());

        System.out.println("Students scoring above 75% (sorted by marks): " +
            topStudents);
    }
}

```

## OUTPUT:

```
Students scoring above 75% (sorted by marks): [Charlie, E
```
